Filling the organic bin correctly!

No plastic in organic waste

Do not use compostable plastic waste bags (DIN EN 13432, 14995), not suitable for composting plants!

Filling the organic bin **correctly**:

Paper bags in organic waste

Put organic waste in the organic waste bin, either unpackaged, wrapped in paper or in paper bags. Here, e.g., newspaper is suitable, or use paper bags such as shopping bags (without a window) from the bakery, butcher or supermarket. Do not use colourful advertising leaflets or glossy magazines! Paper organic waste bags are available in retail stores, drugstores, hardware stores or via the Internet.

Paper

- no foreign matter
- decays with the organic waste
- absorbs moisture
- reduces bad smells and maggot formation in the organic waste bin

Fold your own organic waste bags!

Filling the organic bin **incorrectly**:

No plastic waste bags in the organic bin

Plastic refuse bags, also made from compostable plastic or starch (DIN EN 13432, 14995), must not be put in the organic waste bin! If you collect organic waste in these rubbish bags, put the contents of the bag in the organic waste bin and dispose of the bin liner in residual waste.

Plastic (compostable)

- foreign matter
- does not rot (fast enough)
- makes sorting harder, increases composting costs
- enters soil and water via compost

This does **not** belong in the organic waste bin:

Plastic bags/garbage bags (compostable), plastic packaging and products

Pet litter and animal excrements

Residual waste, sweeping rubbish

Stones, pieces of broken glass, glass
